

What is Engineered Timber Flooring?

Engineered Structure is made for better STABILITY, STRENGTH and DURABILITY. The structure of engineered flooring is made from 4 different layers.

- 7-9 Clear Water Base German KLUMPP UV Lacquer Coating and contributes zero pollution during manufacture, the product is both eco-friendly and harmless against human bodies.
- Veneer gives the best natural look of real wood, including natural variations of grain, colour and the expectation of some natural wooden knots. Prance Timber Flooring brings a wide choice of wood species, including French Oak, American Hickory and Australian Hardwood etc.
- Multi-ply Birch Core stabilizes the structure, enhances the strength of floorboard under Australian extreme weather conditions including radiation, temperature and humidity, furthermore, it reduces the possibility of bows, twists or cupping.

Prance Timber Flooring is passionate about floor quality, and due to the confidence in their product, we offer a Lifetime Structural Warranty and a 20 Year Domestic Wear Warranty, ensuring you will enjoy your floor for years to come. (More information please check our Product Warranty Guide)

Laminate Flooring can be applied to most areas, including living rooms, bedrooms, and kitchens etc. However, due to the unique feature of timber products, engineered timber flooring could not be applied to wet areas such as bathrooms, laundries and toilets etc.

Lastly, sanding and polishing can be applied to engineered timber floors for future maintenance. (More information available on Care and Maintenance Instructions and Timber Floor Installation Methods)
